## THE FOOTE SCHOOL

New Haven, Connecticut USA

---

**Commissioned by:** The Foote School, a private school for grades K-9

**Scope:** Gymnasium, black-box theater and a building for art and music.

The Foote School, situated on a wooded campus overlooking Yale University, commissioned us to design buildings that are at the heart of the school's mission of sparking creativity and developing mind and spirit in young students. We also viewed this commission as an opportunity to create architecture to help define a central landscape and a more natural flow to how students and teachers move around the campus. Our plan put the black-box theater in a prominent position, near the school's entrance, and also sited the gym and music/arts building so that the three together form a well-defined central landscape. The new structures are small in scale and compliment the campus' existing structures.

**Materials:** Concrete; painted steel; mahogany; aluminum windows.

**Completed:** 2001

**Cost:** \$1,500,000

---

**Awards:**

American Institute of Architects Connecticut Design Award
